Applicant(s)

CARDOSO, ANTONIO

Examiner

Nathaniel C. Chukwurah

Art Unit

3721

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 26 September 2005.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-15 and 23 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-15 and 23 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 26 September 2005 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☐ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
Paper No(s)/Mail Date _____.
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____.
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: _____.

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-6, 8, 10-13, 15 and 23 are rejected under 35 U.S.C. 102(b) as being anticipated by McDowell et al. (US 5,375,664).

With regard to claim 1, McDowell et al. discloses an attachment comprising: a lead (30), a hammer (38) slidably coupled to the lead; a lead mounting assembly (20, 26, 36) pivotally coupled to the lead, and having a mounting arrangement as shown with hydraulic actuator (34) configured to allow rotation of the lead in a plane; a hydraulic actuator (36) coupled to the lead (30) and the lead mounting assembly (20, 26, 36); the actuator (36) is adapted to control the orientation of the lead relative to the lead mounting assembly in a second plane that is different than the first plane.

With regard to claim 2, McDowell et al. shows a winch (46) coupled to the lead mounting assembly.

With regard to claim 3, McDowell et al. shows a first mounting hole (see hole at 31) substantially perpendicular to the lead (30).

With regard to claim 4, McDowell et al. shows the center line of the hole (see hole at 31) perpendicular to an axis of rotation of the lead (30) relative to the lead mounting assembly.

Art Unit: 3721

With regard to claim 5, McDowell et al. shows a mounting bracket (26) having a first hole (28) for coupling to a boom (20) and a second mounting hole (see hole adjacent 28) for coupling hydraulic actuator (34) adapted to rotate the mounting bracket (26) relative to the boom and an axis of rotation defined by the first hole.

With regard to claim 6, McDowell et al. shows a mounting plate (portion extending midway of 26) mounting bracket (26), and a shaft (see shaft coupling 31 and 26), the shaft is coaxial with an axis of rotation of the lead relative to the mounting plate.

With regard to claim 8, McDowell et al. shows a cage (hammer housing) shielding the hammer and adapted to travel with the hammer.

With regard to claim 10, McDowell et al. discloses a lead (30), a hammer (38) slidably coupled to the lead, a lead mounting assembly (20, 26, 36) coupling the lead to the boom (20), a boom mounting hole (see hole adjacent 28) defining a first axis of rotation substantially perpendicular to the lead (30); the lead (30) also rotates at (31).

With regard to claim 11, McDowell et al. shows a hydraulic actuator (36) coupled to the lead (30) and the lead mounting assembly (20, 26, 36), the actuator causes the lead to rotate relative the mounting assembly. Further, the actuator is capable of being coupled the existing hydraulic fluid control port of the excavator.

With regard to claim 12, McDowell et al. shows a winch coupled to boom (20).

With regard to claim 13, McDowell et al. shows a mounting bracket (26) having a boom mounting hole (see hole at 28); a mounting plate (portion extending midway of 26) coupled to the mounting bracket (26), and a shaft (see shaft coupling 31 and 26), the shaft is coaxial with an axis of rotation of the lead relative to the mounting plate.

Art Unit: 3721

With regard to claim 15, McDowell et al. shows a cage (hammer housing) shielding the hammer and adapted to travel with the hammer.

With regard to claim 23, McDowell et al. discloses an attachment comprising: a lead (30), a hammer (38) slidably coupled to the lead, a lead mounting assembly (20, 26, 36) coupling the lead to the boom (20), and configured to allow positioning of the lead (30) in to planes relative to the boom (20).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 9 is rejected under 35 U.S.C. 103(a) as being unpatentable over McDowell et al.

The attachment of McDowell et al. meets all of applicant claimed subject matter but lacks the specific teaching of the cage comprising an integral ladder. However such feature is an engineering design choice which would have been obvious to one of ordinary skill in the art as a matter of engineering design choice to include a ladder to the cage since applicant has not disclosed that having an integral ladder solves any stated problem and it appears that the hammer would perform equally well without the integral ladder.

Claims 7 and 14 are rejected under 35 U.S.C. 103(a) as being unpatentable over McDowell et al. in view of Doty (US 4,333,541).

McDowell et al. lacks a plurality of holes formed in the lead and adapted to accept a pin for limiting the travel of the hammer. However, Doty teaches holes (29) for engaging pins (33) in order to limit adjustability to the overall positioning of the channel relative to the side plate.

Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to provide the attachment of McDowell et al. with holes as taught by Doty in order to give limiting adjustability to the overall positioning of the channel relative to the side plate (col. 3, lines 2-3).

Response to Arguments

Applicant's arguments filed 9/26/2005 have been fully considered but they are not persuasive.

With respect to claims 7 and 14, applicant argues that Doty does not teach or suggest a plurality of holes adapted to accept a pin for limiting the travel of hammer.

The examiner disagrees with applicant because Doty clearly disclose a plurality of holes (29, 32) adapted to accept a pin (33).

With respect to claim 9, applicant argues that McDowell does not teach or suggest a cage that shields a hammer.

The Examiner respectfully reminds applicant that such feature is an engineering design choice which would have been obvious to one of ordinary skill in the art at the time of the invention to include a ladder to the cage since applicant has not specifically disclosed that having an integral ladder solves any stated problem and it appears that the hammer of McDowell would perform equally well without the integral ladder.

Art Unit: 3721

With respect to claim 10, applicant argues that does not teach or suggest a lead mounting assembly defining a first axis of rotation substantially perpendicular to the lead and a second axis of rotation substantially perpendicular to the first axis of rotation.

The Examiner disagrees with applicant because the prior art of McDowell disclose the lead's a first axis of rotation at the connection point (28) substantially perpendicular to the lead; and a second axis of rotation at the connection point (31) substantially perpendicular to the first axis of rotation.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Nathaniel C. Chukwurah whose telephone number is (571) 272-4457. The examiner can normally be reached on M-F 6:00AM-2:30PM.

Art Unit: 3721

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Rinaldi Rada can be reached on (571) 272-4467. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
